

SPHEREX

College Onboarding & Deployment Request Guide

Purpose

This document defines the information a college should provide when requesting SPHEREX. It is designed for institutional onboarding so the SPHEREX team can configure the web platform, Android application, users, campuses, departments, admission workflow and deployment environment.

1. Institution Information

Field	Information to provide
College / Institution Name	Official institution name
College Type	Engineering / Arts & Science / Polytechnic / Other
Website	Official college website
Location	City, State, Country
Number of Campuses	Total campuses to configure
Admission Contact	Name, role, phone and email
Admission Season	Academic year / admission cycle

2. Campus Configuration

For every campus, provide the campus name, address, admission contact details and any relevant university/TNEA/admission code. SPHEREX should support campus-level separation so each campus can manage its own leads and admission activity.

- Campus name and address
- Admission phone and email
- University / TNEA / institutional code, if applicable
- Departments offered at that campus
- Campus-specific admission workflow or rules

3. Departments & Courses

List the departments/courses that should appear in SPHEREX. Typical examples from the current system include CSE, IT, AI & DS, ECE, EEE, Mechanical and Cyber Security. The commercial version should treat these as configurable rather than fixed.

4. User & Role Setup

Role	Typical responsibility
Super / System Admin	Institution-wide configuration, users, dashboards and security
Admission Admin	Lead and application management
Counselor	Student follow-up, calls and admission pipeline
Faculty / Department Lead	Assigned student leads and follow-ups

5. Lead Sources to Enable

- College website / enquiry forms
- Google & YouTube Ads
- Facebook & Instagram
- WhatsApp Business
- X / social campaigns
- Email campaigns
- SMS
- Walk-ins and admission drives
- School / education expos
- CSV or existing lead imports

6. Admission Workflow

The current SPHEREX workflow uses the stages **New Inquiry** → **Contacted** → **Cutoff Review** → **Admitted / Rejected**. The college should confirm whether this workflow is suitable or whether additional stages are required.

7. Deployment Preference

Option	Description
SPHEREX Cloud	SPHEREX hosts the application and infrastructure.
College Server	Application is deployed inside the college-controlled server/network.
Hybrid	Application/data components are hosted across college infrastructure and supported cloud services.

8. Onboarding Completion

- Institution and campus configuration completed
- Departments and users created
- Admission workflow configured
- Deployment environment prepared
- Database and synchronization configured
- Web application tested
- Android application configured/build prepared

- Admin verification and staff training completed
- Go-live approval

Important: Do not include passwords, API secrets, payment-card details or other credentials in the onboarding form. Credentials should be created or transferred securely during deployment.
